

# FANUC Drive A06B-6114-H209

|                          |                                                 |
|--------------------------|-------------------------------------------------|
| Model                    | A06B-6114-H209                                  |
| Brand                    | FANUC                                           |
| Category                 | <a href="#">for FANUC Servo Motor</a>           |
| Product Type:            | Servo Amplifier                                 |
| Brand:                   | FANUC                                           |
| Rated Input Voltage:     | 200-240VAC                                      |
| Max. Output Current:     | 80A                                             |
| Compatible Motor Series: | FANUC ?i series                                 |
| Axis Configuration:      | 2-Axis module                                   |
| Main Circuit Control:    | PWM (Pulse Width Modulation)                    |
| Protection Class:        | IP10 (For enclosed, panel-mounted installation) |
| Cooling Method:          | Forced air cooling                              |
| Main Application:        | CNC machine tools                               |

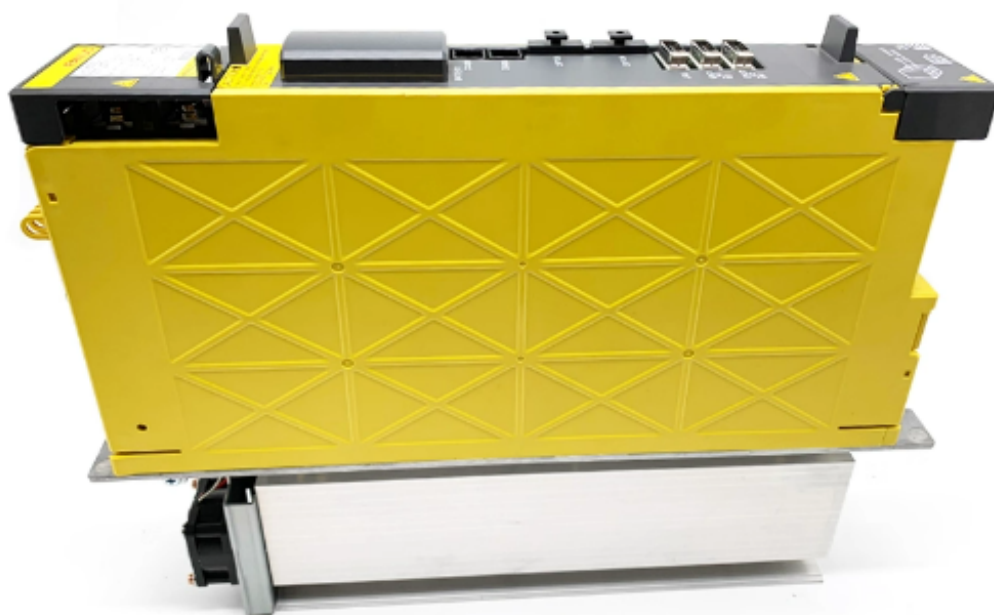

## Note:

Invshop recommends that you inquire with the original factory or its agents about the latest production status and technical information about A06B-6114-H209. The product parameters displayed on Invshop are entered by Invshop engineers according to the specifications, and efforts have been made to minimize errors, but we cannot guarantee the complete correctness of the parameters. Please refer to the specification sheet!
